

LOUPEDECK RELEASE NOTES

64bit: MacOS 10.12 (or later), Windows 10

VERSION 3.1.1

This release fixes major stability issues for CT system and for Adobe Photoshop.

Hardware Support

- Loupedeck CT [CT]
- Loupedeck+ [LD+]
- Loupedeck [LD]

Software Support:

- Ableton Live 10 [CT]
- Adobe After Effects [LD+, CT]
- Adobe Audition [LD+, CT]
- Adobe Lightroom Classic [LD, LD+, CT]
- Adobe Illustrator [CT]
- Adobe Photoshop [LD, LD+, CT]
 - Camera Raw [LD, LD+, CT]
- Adobe Premiere Pro [LD+, CT]
- Final Cut Pro X (macOS) [LD+, CT]
- Capture One Pro (11.1 or later) [Beta: LD, LD+]
- Skylum Aurora HDR (v1.2 or later) [LD, LD+]
- System / Mac [CT]
- System / Win [CT]
- Windows Apps [CT]
 - Chrome
 - Firefox

Version 3.1.0 new features:

- General
 - PageUp and PageDown added to key-strokes

Version 3.1.0 fixes issues on

- Photoshop no longer causes Loupedeck service to crash
- Loupedeck Service reconnects to CT automatically if connection is dropped
- Deleting User Action will always delete the correct one, not the adjacent version (rare issue)
- Search is no longer cleared when changing from one control element to another
- User Actions are now searchable
- GUI visual appearance has been fine tuned
- Application list is now in alphabetical order
- Equals, Comma, Minus & Period are now renamed.
- Extra "+" character is no longer shown when creating User Actions

Known issues

- General
 - User Actions depend on the computer speed: There are no delay between recorded actions. Every action will be activated immediately one after another even if previous action has not been completed (this might be a problem with patch processing)
 - Lightroom 6.14 support is currently offline (will be fixed on upcoming release)

- Ableton Live
 - Zooming does not work with all non-English keyboard layouts.
- After Effects
 - In some cases, Loupedeck needs to be set back to After Effect's control surface manually.
- Audition
 - When direction of the selection is changed, the base point of the selection may shift
 - Doing a selection on a track after a mouse click moves the playhead to the beginning of the track.
- Final Cut Pro X
 - Keyboard layout needs to be changed to English to enable special characters to work as shortcuts for Loupedeck (macOS).
- Lightroom
 - Local tools are not directly open for customization (e.g. crop, brush, etc.). Will be available in Loupedeck Software 3.3
 - On Loupedeck CT local tools can be edited by:
 - 1) Activate Local Tool in Lightroom
 - 2) Open Loupedeck Setup and while setup is loading
 - 3) Activate Lightroom
 - As local tool is open, Loupedeck setup will activate in the same mode
 - CT is not in sync if local tools are changed from GUI without applying previous local tool
 - Sometimes navigating with arrows causes endless loop and image strip is navigated to the end. May be interrupted by activating a local tool (e.g. Crop Tool).

- Sometimes you need to press navigation arrow twice for navigating to next or previous image.
 - Restart Lightroom to fix.
- Skylum Aurora HDR 2018 & 2019
 - Keyboard (language) issue: Control dial, D1 and D2 do not work with all tools (Windows only)
 - Feedback: <https://skylum.com/support>
- Phase One Capture One (beta support)
 - Clear Rating, Clear Color Tag -actions can only be assigned to C1 and C2 (LD+)
 - White Picker does not activate (Win)
 - Deselect All does not work (win)
 - AMD's software might block some keyboard shortcuts thus making some functions unresponsive.
- Photoshop
 - Some actions are currently offline:
 - Merge Selected Layers as New
 - Toggle Layer / Layer Mask
 - Setup indicates that Redo (FN+Undo) is assigned, but it needs to be reassigned again. If not, then pressing Redo will toggle color proofing On/Off.
 - Camera Raw mode: Hue & Sat buttons are open for (LD+)
 - Camera Raw: After using an adjustment, navigation wheel effects on those values instead of changing image (macOS).
 - Camera Raw:
 - Redo action (and button) does not activate redo function.

- Premiere Pro
 - Keyboard layout needs to be changed to English to enable special characters to work as shortcuts for Loupedeck.
 - In some cases, Loupedeck needs to be set back to Premiere Pro's control surface manually.
- MacOS
 - When Lightroom 6 and Lightroom Classic are both installed, Loupedeck or Loupedeck+ will only work with Lightroom Classic
 - After installing a new version, in some cases, Loupedeck will not respond until "old Loupedeck permission" has been removed from Security & Privacy Accessibility and new permission has been granted.
 - CT does not wake up after sleep (some improvements has been made, but still not 100% bullet proof).

Some examples of upcoming features:

- Dial acceleration on/off switch (LD, LD+) for: Dials, Scrolls, Control Dial (LD+) & Crop/Rotate (LD)
- Ability to create your own User Plugin(s), including:
 - Improved User Actions (button press)
 - User Adjustments (dial rotation)
 - Ability to map actions as dial rotations
- More Wheel Widgets
 - User definable XYZ wheel
 - Touch screen: X & Y axis
 - Wheel ring: Z axis
 - Lightroom specific wheel tools
- Lightroom 6.14 support for Loupedeck Software v.3.3 (LD, LD+)
