

LOUPEDECK RELEASE NOTES

64bit: MacOS 10.12 (or later), Windows 10

VERSION 3.2.5 (BUILDS 3563 & 3564)

This release includes bug fixes for several supported applications and updates to Lightroom plugin.

Hardware Support

- Loupedeck CT [CT]
- Loupedeck+ [LD+]
- Loupedeck [LD]

Software Support (MacOS & Windows):

- Ableton Live 10 [CT]
- Adobe After Effects [LD+, CT]
- Adobe Audition [LD+, CT]
- Adobe Lightroom Classic [LD, LD+, CT]
- Adobe Illustrator [CT]
- Adobe Photoshop [LD, LD+, CT]
 - Camera Raw [LD, LD+, CT]
- Adobe Premiere Pro [LD+, CT]
- Capture One (Shortcut based) [LD, LD+, CT]
- Skylum Aurora HDR (v1.2 or later) [LD, LD+]

Software Support (MacOS only):

- Final Cut Pro X (macOS) [LD+, CT]
- System / Mac [CT]

Software Support (Windows only):

- Streamlabs OBS (v0.20 or later) [CT]
- System / Windows [CT]

Version 3.2.5 new features & improvements

- General
 - Mouse Drag Tool's release delay has been shortened to 200ms (better to use in e.g. curves)
- Lightroom
 - Crop Tool has been totally rewritten
 - Loupedeck+, Loupedeck Original:
 - New Actions
 - Copy All Adjustments (copies to memory all the possible adjustment values)
 - Deselect Other(s) (deselects all except active one when multiple images are selected)
 - Reset All Adjustments / FN+UNDO: now also available for mapping
 - Factory Default layout updated: FN+Arrow Down = Deselect Other(s)
 - Control Dial can be assigned with any adjustment
 - All dials have been opened for mapping, but other adjustments are not yet available (update in progress)
 - All tools are visible and open for mapping (except Crop)
 - All adjustments are not yet available for the tools (update in progress)
 - Loupedeck CT:
 - Factory Default Layout has been updated:
 - New rating workspace for Develop mode

- New Actions:
 - Copy All Adjustments (copies to memory all the possible adjustment values)
 - Deselect Other(s) (deselects all except active one when multiple images are selected)
 - Filtering by color tag
 - Filters On/Off (sets all possible filters on/off)
 - Painter Tool (Library)
 - Plug-in Manager (open)
 - Reset All Adjustments
 - Stack Into Group
 - Unstack Group
 - Collapse / Expand Stack
 - Virtual Copy (Original):
Makes a virtual copy and resets the image as original
 - Virtual Copy (Toggle Color):
Makes a virtual copy and changes it to other color mode (clr/bw)
 - Virtual Copy (Tog. Clr / org):
Makes a virtual copy, resets image, changes it to other color mode

Version 3.2.5 fixes issues on

- Ableton Live:
 - Following rotation adjustments are now functional:
 - Tempo (workspace 1)
 - Loop position, Loop Length (workspace 1)
 - Global Quantize (workspaces 1 & 4)
 - Skip ↔, ↑ ↓ (workspaces 1 & 3)
 - Skip Select ↔, ↑ ↓ (workspace 1)
 - Following press actions are now functional:
 - Toggle Clip Grid (workspace 4)
 - Following default mapping actions are no longer hiding:
 - Clip Parameter Mode (workspace 3): 2nd Wheel -> Transport rotation
- After Effects:
 - After installing new Loupedeck Software, After Effects could not locate main entry point for Loupedeck2.aex
- Audition:
 - Action name incorrect: "Trim In-Point To Playhead" fixed to "Trim Out-Point To Playhead"
- Capture One
 - MacOS: Capture One 20 was not recognized after update (v.13.1) because of changed identifier
 - Full Screen (Screen Mode) with Loupedeck+ and Loupedeck Original is now operational
 - Windows: Gradient Mask had a wrong shortcut
 - Note: Updating Capture One 20 to v13.1 fixed issue: Using Whites-dial shuts down Capture One

- Final Cut Pro X (MacOS):
 - Color Board actions are now working when German region is set
 - Toggle Selected Effects On/Off now works when MacOS region setting is set to German but keyboard is set to English
 - Frame Navigation will not switch window focus
- General:
 - Mouse Wheel + Keyboard Modifier was not stable: Some rotation clicks were executed without a keyboard modifier
- Lightroom:
 - Unnecessary groups/actions removed
 - Action name "Navigate To [direction]" changed to "Navigate [direction]"
 - Crop Tool:
 - Selecting 4:3 as aspect ratio is exactly 4:3 (not 3.98961038961039:3)
 - Does not lose aspect ratio when re-adjusted with mouse
 - Does not lose aspect ratio when crop area touches image borders
- Streamlabs OBS
 - Hide/show source works now on the first press (and not after the second)
 - CT has more stable focus to Streamlabs after the target application has fully started.
 - Sometimes "???" was displayed on CT screen when mapping had not been re-loaded and action/adjustment function cannot be found
 - Unlock plugin action did not work if user was out of Streamlabs

- UI
 - Ctrl+Shift+I will not open debugging mode for the UI anymore
 - Windows key can be recorded without trickery (Custom actions, Custom adjustments)

Known issues on v.3.2.5

- General
 - If Loupedeck 3.2.x version is downgraded back to 3.1.1, service fails to start because versions are not compatible downwards: "/appdata/Local/Loupedeck/Layouts2" folder needs to be removed manually to get 3.1.1 working (this will delete mapped actions).
 - Sometimes Setup program does not start when clicked on task bar icon (second click will start it)
 - Sometimes Action main groups cannot be closed. Resetting search (x -symbol) will reset and Groups can now be closed with double click.
 - After installing: Loupedeck software might not start when icon is clicked (force quit process and restart software – or restart computer)
- Custom Adjustments:
 - Acceleration algorithm may cause odd behavior if dials are rotated fast
- Ableton Live
 - Zooming does not work with all non-English keyboard layouts
- Audition
 - When direction of the selection is changed, the base point of the selection may shift

- Doing a selection on a track after a mouse click moves the playhead to the beginning of the track
- Final Cut Pro X
 - Keyboard layout needs to be changed to English to enable special characters to work as shortcuts for Loupedeck (macOS)
 - In rare cases, the Command Sets folder does not exist and must be created manually. Instructions:
<https://loupedeck.com/en/support#final-cut>
- Lightroom
 - On reset Lightroom profiles: "Rating / Develop" workspace is activated upon Lightroom startup (instead of Basic Adjustm. on round button 2).
Fix: Change workspace order so that "Basic Adjustm." workspace is the first in Develop list.
 - Toggle icons for Color Mode action are wrong
 - MacOS: Merge to Panorama (without dialog) and Merge to HDR (without dialog) discards keyboard modifier and opens with dialog
 - Local Tool Workspaces can only be accessed if Loupedeck Setup is started after a local tool is activated
 - Sometimes navigating with arrows causes endless loop and image strip is navigated to the end. May be interrupted by activating a local tool (e.g. Crop Tool)
 - Sometimes you need to press navigation arrow twice for navigating to next or previous image
 - Restart Lightroom to fix
- Phase One Capture One (beta support)
 - Clear Rating, Clear Color Tag - actions can only be assigned to C1 and C2 (LD+)

- White Picker does not activate (Win)
- Deselect All does not work (Win)
- AMD's software might block some keyboard shortcuts, thus making some functions unresponsive
- Photoshop
 - Some actions are currently offline:
 - Merge Selected Layers as New
 - Toggle Layer / Layer Mask
 - Setup indicates that Redo (FN+Undo) is assigned, but it needs to be reassigned again. If not, then pressing Redo will toggle color proofing On/Off
 - Camera Raw mode: Hue & Sat buttons are open (for LD+)
 - Camera Raw: After using an adjustment, navigation wheel effects on those values instead of changing image (macOS)
 - Camera Raw: Redo action (and button) does not activate redo function
- Skylum Aurora HDR 2018 & 2019
 - Keyboard (language) issue: Control dial, D1 and D2 do not work with all tools (Windows only)
 - Feedback: <https://skylum.com/support>
- Streamlabs OBS:
 - If rotation adjustment is added to dials, user needs to switch between scenes to retrieve mixer items again
 - Streamlabs Plugin needs to be locked manually to use it (lock action is in the profile mapping)
 - Mixer items are only visible in Workspace 1
- Premiere Pro
 - Keyboard layout needs to be changed to English to enable special characters to work as shortcuts for Loupedeck

- In some cases, Loupedeck needs to be set back to Premiere Pro's control surface manually
- MacOS
 - CT does not wake up after sleep
 - After installing a new version, in some cases, Loupedeck will not respond until "old Loupedeck permission" has been removed from Security & Privacy Accessibility and new permission has been granted
 - When Lightroom 6 and Lightroom Classic are both installed, Loupedeck or Loupedeck+ will only work with Lightroom Classic

Some examples of upcoming features:

- Separated dial acceleration on/off switch:
 - Dials (LD+, LD)
 - Scrolls (LD+, LD)
 - Control Dial (LD+)
 - Crop/Rotate (LD)
- More adjustments and actions for Loupedeck+ and Loupedeck Original's opened dials
- More Wheel Widgets
 - User definable XYZ wheel
 - Touch screen: X & Y axis
 - Wheel ring: Z axis
